Ipswitch IMail Server
Messaging that Works for Businesses of all Sizes

Ipswitch IMail™ Server solutions deliver the messaging capabilities your business needs, without the cost or long-term maintenance burden of complex and difficult-to-manage enterprise systems. Reliable, versatile, easy to set up and run, IMail provides email and instant messaging, calendar and contact list sharing and protection from spam and viruses. Ipswitch has been delivering practical information technology for more than 15 years and has designed IMail to deliver reliable and flexible messaging.

Proven Technology

Ipswitch IMail Server is a proven messaging technology that delivers billions of email messages worldwide for over 60 million users every day. With IMail Server Premium, users can send and receive email using any standards-based client, including Microsoft® Outlook®, Outlook Express or Eudora. In addition, users can access email from anywhere via IMail's customizable Web messaging client, available in nine languages.

Instant Messaging

Ipswitch IMail Server Premium makes instant messaging a secure and valuable business communication tool for enabling your teams to collaborate instantly around the world or around the corner. Ipswitch's instant messaging server encrypts all communications, facilitating secure communication within the organization. Since all messages pass through the company-managed server where they are logged, the instant messaging server offers you complete control of the creation of user accounts and links with outside offices. The ability to encrypt, authenticate and archive communications enables businesses to use IM while complying with the stringent requirements of the Federal Health Insurance Portability and Accountability Act (HIPAA) and other regulations defining handling of sensitive information.
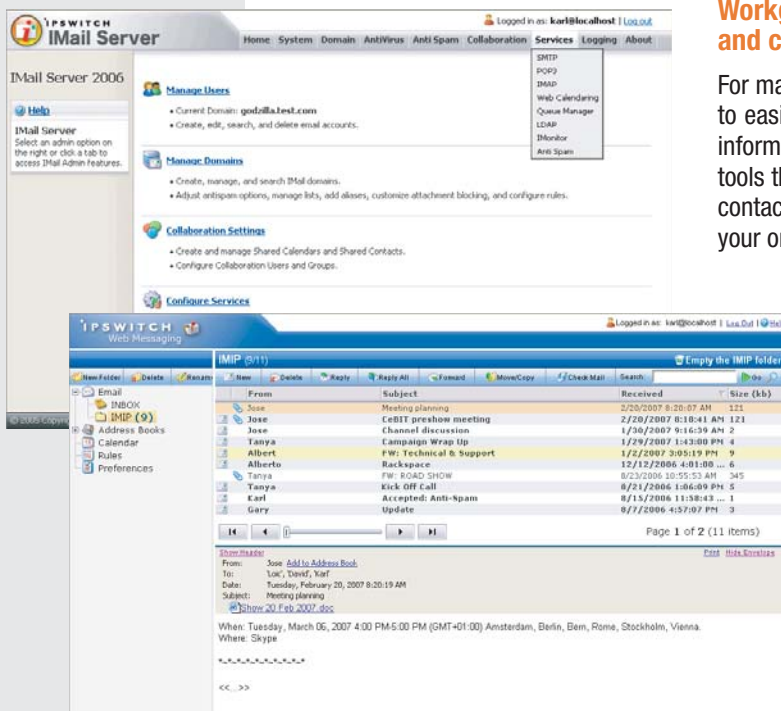

Workgroup Collaboration: Save time with shared calendars and contacts

For many teams, working together productively depends on the ability to easily schedule meetings and share calendars, contacts and other information. IMail Server Premium includes powerful collaboration tools that allow Microsoft Outlook users to share their own up-to-date contact lists, calendars, task lists and Outlook notes securely within your organization.

With free/busy scheduling, IMail Premium enables co-workers to check each other's availability before sending meeting invitations. Administrators can create and update company-wide contact lists and calendars centrally, eliminating the need for everyone to maintain separate copies of the same information.

IMail Server's Web-based administrative console provides a centralized access point for managing your mail server.

IMail Server's web messaging allows users to send and receive rich-text messages and features an intuitive user interface

Protection against the hazards of spam

Unsolicited commercial email, or spam, dramatically impacts employee productivity and can drain your critical business resources. Organizations need to fight spam with a multi-layered approach that combines a broad range of techniques to turn spam's own objectives, characteristics, and defenses against itself. IMail's industry-leading anti-spam offering combats the increasingly sophisticated techniques employed by spammers with a unique combination of human and machine intelligence that identifies and blocks spam in 30 languages.

Protection against dangerous viruses

IMail protects your business and your users from malicious code, Trojan horses, worms and other email borne threats by offering fully-integrated anti-virus technology from two leading security vendors, Symantec and BitDefender. IMail leverages the power of Symantec™ Scan Engine to safeguard your email with LiveUpdate™ technology that automatically loads new virus definitions. Or, choose the BitDefender anti-virus solution, one of the most comprehensive virus scanners available.

Realize rapid return on investment

IMail Server products install quickly, and unlike more complicated, large-footprint messaging solutions, IMail is designed to place minimal maintenance burden on network administrators. For businesses of all sizes, success depends on getting more done with less. Organizations must constantly strive to keep costs down by implementing practical software solutions that are able to effectively produce results in the long term. Ipswitch IMail Server products meet this critical business need by providing secure, powerful and straightforward messaging capabilities in a comprehensive solution that is easy to install, easy to maintain, and easy to use.

Ipswitch Messaging Solutions are configured to meet your needs

Ipswitch IMail solutions are available in three configurations: Standard, Plus and Premium. IMail Premium includes powerful collaboration tools, secure instant messaging and vital anti-spam protection. Ipswitch IMail Server Plus offers premium anti-spam protection; all IMail Server solutions are available with advanced anti-virus protection. All Ipswitch messaging products are offered in packages for 25, 100, 250, 1000 and unlimited email accounts. The chart below summarizes the offerings of each member of the Ipswitch IMail family.
